Initially, nothing is defined in the page layout shown above. Place the record layout and define fixed data in the page interactively. You can define fixed data in the same way you did while designing the record layout.

You can place the record layout in the following steps.

Example Action: Move the cursor to the position (Across : 5, Down : 5) you want to place the record layout and press the F13 key.

F3=Exit	F6=Place graphics	F9=Place page segment
F11=Place record layout	F12=Cancel	F24=More keys
Press F6, F9 or F11 for graphics, page segment or record layout.		

A percent sign (%) displays to indicate the cursor position. (A mark is not displayed because the element type has not yet been specified.)

The function key area changes and F11=Place record layout is displayed.
